Notes

Pros: I really like size relationship between the image and the body copy. Also like the typeface choices and the general feeling of the page in general (nice space) - I feel like the whitespace could be pushed even more maybe? But I also like the relationships so not sure.

Cons: These cons are pretty minor (the word con sounds really scary) - maybe align the bottom of the body copy to the bottom of the image. Maybe make the title a little bit smaller or increase the spaces between the title and the body. Also maybe make the menu navigation button a little smaller
